

Decode A Web Page 🌶️🌶️🌶️🌶️

Exercise 17 (and [Solution](#))

Note: this is a 4-chili exercise, not because it introduces a concept (although it introduces a new library), but because this exercise is more like a project. Feel free to skip this and come back when you're more ready!

Use the BeautifulSoup and requests Python packages to print out a list of all the article titles on the [New York Times homepage](#).
