

List Remove Duplicates 🐍 🐍

Exercise 14 (and [Solution](#))

Write a program (function!) that takes a list and returns a new list that contains all the elements of the first list minus all the duplicates.

Extras:

- Write two different functions to do this - one using a loop and constructing a list, and another using sets.
- Go back and do [Exercise 5](#) using sets, and write the solution for that in a different function.
