

Odd Or Even 🐍

input if types int equality comparison numbers mod

Exercise 2 (and [Solution](#))

The exercise comes first (with a few extras if you want the extra challenge or want to spend more time), followed by a discussion. Enjoy!

Ask the user for a number. Depending on whether the number is even or odd, print out an appropriate message to the user. *Hint: how does an even / odd number react differently when divided by 2?*

Extras:

1. If the number is a multiple of 4, print out a different message.
2. Ask the user for two numbers: one number to check (call it num) and one number to divide by (check). If check divides evenly into num, tell that to the user. If not, print a different appropriate message.
