

Password Generator 🌶️🌶️🌶️🌶️

Exercise 16 (and [Solution](#))

Note: this is a 4-chili exercise, not because it introduces a concept, but because this exercise is more like a project. Feel free to skip this and come back when you're more ready!

Write a password generator in Python. Be creative with how you generate passwords - strong passwords have a mix of lowercase letters, uppercase letters, numbers, and symbols. The passwords should be random, generating a new password every time the user asks for a new password. Include your run-time code in a main method.

Extra:

- Ask the user how strong they want their password to be. For weak passwords, pick a word or two from a list.
