

Reverse Word Order 🐍 🐍 🐍

strings

Exercise 15 (and [Solution](#))

Write a program (using functions!) that asks the user for a long string containing multiple words. Print back to the user the same string, except with the words in backwards order. For example, say I type the string:

```
My name is Michele
```

Then I would see the string:

```
Michele is name My
```

shown back to me.
